# Qualfiber

### **Chapter 1 Product Introduction**

### **1.1 Product Description**

Thank you for choosing the 1G3F+WIFI+CATV+POTS XPON ONU. The product is designed as HGU (Home Gateway Unit) in deferent FTTH solutions. The carrier-class FTTH application provides data service access. It is based on mature and stable, cost-effective XPON technology. XPON can switch automatically with EPON and GPON mode when it accesses to the EPON OLT or GPON OLT. It adopts high reliability, easy management, configuration flexibility and good quality of service (QoS) guarantees to meet the technical performance of the module of Telecom EPON CTC3, and GPON Standard of ITU-TG.984.

Figure 1-1: 1G3F+WIFI+CATV+POTS XPON ONU

### **1.2 Special features**

- Support EPON and GPON Mode
- Support ONU auto-discovery/Link detection/remote upgrade of software
- WAN connections support Route and Bridge mode
- Route mode supports PPPoE/DHCP/ static IP
- Support IPv4/IPv6

# Qualfiber

- Support WIFI Interface and multiple SSID
- Support QoS and DBA
- Support port VLAN configuration
- Support Firewall function and IGMP snooping multicast feature
- Support LAN IP and DHCP Server configuration;
- Support Port Forwarding and Loop-Detect
- Support TR069 remote configuration and maintenance
- Support Pots interface for VoIP Service
- Support CATV interface for Video Service
- Specialized design for system breakdown prevention to maintain stable system

### **1.3 Technical Parameter**

Technical item	Details						
	1 G/EPON port(EPON PX20+ and GPON Class B+)						
	Receiving sensitivity: ≤-27dBm						
PON Interface	Transmitting optical power: 0~+4dBm						
	Transmission distance: 20KM						
Wavelength	TX: 1310nm, RX: 1490nm						
Optical Interface	SC/UPC Connector						
Optical interface	(SC/APC Connector for CATV)						
	1 FXS, RJ11 connectors						
DOTS interface	Support: G.711/G.723/G.726/G.729 codec						
	Support: T.30/T.38/G.711 Fax mode, DTMF Relay						
	Line testing according to GR-909						
LAN Interface	LAN port for GE and FE automatic adaptive mode. Full/Half, RJ45						
	connector						

# Qualfiber

	RF, optical power: +2~-18dBm							
	Optical reflection loss: ≥45dB							
	Optical receiving wavelength: 1550±10nm							
CATV Interface	RF frequency range: 47~1000MHz, RF output impedance: 75 $\Omega$							
	RF output level: 78dBuV							
	AGC range: 0~-15dBm							
	MER: ≥32dB@-15dBm							
	Compliant with IEEE802.11b/g/n,							
	Operating frequency: 2.400-2.4835GHz							
	Support MIMO, Rate up to 300Mbps,							
Wiroloss	2T2R,2 external antenna 5dBi,							
VVII CIC35	Support: multiple SSID							
	Channel: Auto							
	Modulation type: DSSS, CCK and OFDM							
	Encoding scheme: BPSK, QPSK, 16QAM and 64QAM							
Push-Button	3,For Function of Reset、WLAN、WPS							
Operating Condition	Temperature: 0°C~+50°C							
	Humidity: 10%~90% (non-condensing)							
Storing Condition	Temperature: -30°C~+60°C							
	Humidity: 10%~90% (non-condensing)							
Power Supply	DC 12V/1A							

## Qualfiber

Power Consumption	≤6W
Dimension	155mm×92mm×34mm (L×W×H)
Net Weight	≤0.24Kg

Table 1: Technical parameters

### 1.5 Panel description

## Qualfiber

Figure 1-4: Push button Panel

WHET WPS POWER LOS PON LANT LANZ LANS LANS FXST NORMAL WORN

Figure 1-5: Led Panel

LED	Status	Description
POWER	On	The device is powered up.
	The device is powered down.	
2011	On	The device has registered to the PON system.
PON	Blink	The device is registering the PON system.
	The device registration is incorrect.	

## Qualfiber

LOS	Blink	The device doses not receive optical signals.					
	Off	The device has received optical signal.					
SYS	On	The device system runs normally.					
	Off	The device system runs abnormally.					
	On	The WIFI interface is up.					
VVIFI	Blink	The WIFI interface is sending or/and receiving data (ACT).					
	Off	The WIFI interface is down.					
WPS	Blink	The WIFI interface is securely establishing a connection.					
	Off	The WIFI interface does not establish a secure connection.					
5.40	On	Phone has registered to the SIP Server.					
FXS	Blink	Phone has registered and data transmission (ACT).					
	Off	Phone registration is incorrect.					
	On	Ethernet connected properly (LINK).					
LAN1~LAN4	Blink	Ethernet is sending or/and receiving data (ACT).					
	Off	Ethernet connection exception or not connected.					
Worn	On	Input optical power is higher than 3dbm or lower than -13dbm					
(CATV)	Off	Input optical power is between -13dbm and 3dbm					
Normal	On	Input optical power is between -13dbm and 3dbm					
(CATV)	Off	Input optical power is higher than 3dbm or lower than -13dbm

### **Chapter 2 Quick Installation**

### 2.1 Standard Packing Contents

When you receive our products, please check carefully to make sure that our products whether have some defects or not. If something wrong with shipping, please contact carrier; other damage or lack of some parts, please contact with dealer.

Contents	Description
ONU	1 pcs
Power Adapter	1 pcs
User Manual	1 pcs

Table 3: Packing Contents

Figure 2-1: Actual package content

### 2.2 Quick Installation

# Qualfiber

- 1. Connecting the optical fiber cable to the unit.
  - a) Remove the protective cap of the optical fiber.
  - b) Clean the end of the optical fiber with an optical fiber end cleaner.
  - c) Remove the protective cap of the ONU optical interface (PON interface). Connect the fiber to the PON port on the unit.

Note: When measuring the optical power before connecting to the ONU, it is recommended to use a PON Inline Power Meter. The receiver optical power should be between -7dbm and -28 dBm by using 1490nm.

While connecting, please note:

- Keep the optical connector and the optical fiber clean.
- Make sure there are no tight bends in the fiber and that the bending diameter is greater than 6cm. Otherwise, the optical signal loss may be increased, to the extent that signal may be unavailable.
- Cover all optic ports and connectors with protective cap to guard against dust and moisture when the fiber is not used.
- 2. Apply power to the unit. If the product has the power button, please push the power button before used.
- 3. After the ONU is power ON, Indicators should light up as for normal operation. Check whether the PON interface status LED (PON) is on continuously. If it is, the connection is normal; otherwise there is either problem of the physical connection or the optical level at either end. This may be caused by either too much or too little attenuation over the optical fiber. Please refer to the Panel Lights Description for normal LED activity.
- 4. Check all signal levels and services on all the ONU communication ports.

### Unit Installation Adjustment

### Installing the ONU on a horizontal surface (Bench top)

Put the ONU on a clean, flat, sturdy bench top. You must keep the clearance for all sides of the unit to more than 10cm for heat dissipation.

## Qualfiber

### **Chapter 3 Configuration**

After finishing the basic connection configuration, you can use its basic function. In order to satisfy individuation service requirements, this charter provides the user parameter modification and individuation configuration description.

### 3.1 Login

The device is configured by the web interface. The following steps will enable you to login:

- 1、 Conform "2.2 Quick Installation" to install;
- 2、 The device management default IP address is 192.168.1.1;
- 3、Open your web browser, type the device IP in address bar;
- 4. Entry of the user name and password will be prompted. Enter the default login user name and password. By default, there are two user levels for management. Administration level

User name is "superadmin",

#### Password is "superadminqf".

Normal level user name is "admin", password is "admin".

The Administration account is able to access and modify all settings of ONU. It also can modify user account's username and password.

The normal account can only be used to view configurations, status and configure few parameters.

Figure 3-1: Login

Parameter	Description				
	The list of WAN connection name that would be created according to the				
	detail WAN Configuration.				
	If you want to create a new WAN connection, please select "Create a new				
Connection Name	WAN connection" and input other Parameter at the same time and then click				
	"OK" button. If you want to edit WAN connection, please select the wan				
	connect name you want to edit and change some Parameter and then click				
	"OK" button.				
	If you want to delete one connection, please select the wan connection you				
Delete	want to delete and then check "Delete" option.				
Enable	Enable or Disable the WAN Connection you have choosed.				
Mode	Route/Bridge. The device works on route mode with this WAN connection.				
	If you select Route WAN Connection,the NAT option is default enable.If you				
NAT	select Bridge WAN connection, the NAT option is default disable. Checked				
	indicates the NAT Function is enabled.				

S	ervice Type	Service mode indicates what the wan connection is used for.					
		There are INTERET 、TR069、Other and Voip for choosing.					
VLAN	Enable VLAN	Checked indicates the packets are transmitted by the PON port take VLAN tag. Unchecked indicates the packets are transmitted by the PON port don't take VLAN tag.					
	VLAN ID	nput the VLAN ID you want to set. Range is 0~4094. Input 0 means don' use any VLAN.					
Multicast VLAN		Input the VLAN ID you want to set, according to the IPTV Confiuration. This option default value is -1, means no use.					
	802.1P	Select VLAN priority you want to set. Range is 0~7.					
LAN Port Binding		Checked the LAN Port indicates that lan interface would act with this wan connection Route or Bridge.					
SSID Port Binding		Checked the SSID Port indicates that lan interface would act with this wan connection route or bridge.					
IP P	rotocol Mode	IPv4、IPv6、IPv4/IPv6					
MTU		Max transfer unit. Default Value (in Byte): 1500(static/DHCP) or 1492(PPPoE).					
W	AN IP Mode	IPoE/PPPoE/Static					
	Username	PPPOE account.					
	Password	PPPOE password.					
	Keep Alive Time	The PPP Link maintenance time. This parameter value default is 60S.					
PPPOE	PPPoE Mode	Continous or Connect on Demand					
	Service Name	This option is not required generally, but if the PPPoE Server checks the option, you should input according to ISP.					

### 3.3.2 Port Binding

### 3.3.2.1 Binding Mode

This page supports the LAN or SSID binding mode based on VLAN. Users could deploy different VLAN configuration according to actual demands.

	Destination Start Port:							
Figure 3-20: Rules Settings								

### 3.3.6 WLAN Configuration

This page allows the user to deploy WLAN (Wi-Fi) Configuration, including WLAN Enable option, SSID Name, Encryption options.

Parameter	Description
Enable	Checked indicates that WLAN function is enabled. Unchecked
	indicates that WLAN function is disabled.
Mode Selection	The Standard of WLAN Mode: B, G, N, B/G, B/G/N
Band Width	20MHz, 20/40MHz
SSID List	SSID1, SSID2, SSID3, SSID4. Support multiple SSID.
	SSID1 enable, SSID2/SSID3/SSID4 disable
SSID Name	WiFi name

## Qualfiber

SSID Broadcast	Enable indicates that Wlan client could find the SSID
	Disable indicates that Wlan client couldn't find the SSID
Encryption	Open ,WEP,WPA/WPA2 Personal, WPA/WPA2 Enterprise
WPA Password	The password of SSID
WPS Enable	Enable or disable WPS function

### 3.6.3 Log File Configuration

#### 3.6.2.1 Log Level

This page allows the user to different level about Write Level and Display Level. There are many available options, such as Emergency, Alert, Critical, Error, Warning, Notice,

Informational, Debug.

### 3.8 Help

The Help information of ONU displays instruction and prompt of each web UI.

Figure 3-53: Help information

## Qualfiber

## Chapter 4 Examples

### 4.1 Internet service

There are two configuration methods for Internet service. One works on Bridge WAN and another works on Route WAN.

### 4.1.1 Requirement

#### Scenario 1:

Client binds on bridge mode, service VLAN is 10. User client gets IP address from DHCP Server.

#### Scenario 2:

Client binds on route mode, service VLAN is 10. ONU gets IP address by PPPoE.

### 4.1.2 Steps

For scenario 1 and scenario 2, it needs to configuring VLAN in OLT side and WAN connection in ONU web.

#### 4.1.2.1 Bridge and Route mode for Internet service

In this example, we take Huawei MA5680T for example, to introduce how to configure Internet service.

#### Huawei MA5680T Configurations

- (1) Create VLAN
- MA5680T(config)#vlan 10 smart
- (2) Configure uplink port's VLAN

MA5680T(config)#port vlan 10 0/19 1

MA5680T(config)#interface giu 0/19

MA5680T(config-if-giu-0/19)#native-vlan 1 vlan 10

(3) Configure DBA profile

MA5680T(config)#dba-profile add profile-id 12 profile-name test type3 assure 102400 max 899968

(4) Configure line profile

MA5680T(config)#ont-lineprofile epon profile-id 11 profile-name test

MA5680T(config-epon-lineprofile-11)#llid dba-profile-id 12

MA5680T(config-epon-lineprofile-11)#commit

(5) Configure service profile

MA5680T(config)#ont-srvprofile epon profile-id 6 profile-name test

MA5680T(config-epon-srvprofile-6)#ont-port eth 4

MA5680T(config-epon-srvprofile-6)#commit

(6) Authorize ONU

## Qualfiber

### MA5680T(config)#interface epon 0/5

MA5680T(config-if-epon-0/5)#ont add 1 0 mac-auth a8bf-3c00-e76a oam ont-lineprofile-id 11 ont-srvprofile-id 6

(7) Configure service-port

MA5680T(config)#service-port 27 vlan 10 epon 0/5/1 ont 0 multi-service user-vlan 10

(8) Configure ONU bridge mode or Route mode by ONU web

							Exit

	IP Protocol						
	IP Protocol Mo	de:	IPv4 ▼				
				OK	Cancel		

Figure 4-1: Bridge Mode

### Attention:

1.If you choose bridge mode, please binds correct LAN interface.

2.Bridge Internet service for client get the IP Address by PPPoE, if client get the IP Address by DHCP, it would get the IP from LAN DHCP Server.

3.Bridge Other service for client get the IP Address by DHCP/PPPoE from ISP

		OK Cancel	

Figure 4-2: Route Mode for PPPoE

### Attention:

1.If you choose Route mode, please check the service is Internet, otherwise the WAN Connection get the ip address, the user client could not surf the internet.

2.Please enable LAN DHCP Server, otherwise user client couldn't get the IP address from LAN DHCP Server.

# Chapter 5 FAQ

1. After power, why are all the lights lit? Reasons:

1) Power connection errors;

2) Power is not normal.

Solution:

- 1) Check that the power cable is connected;
- 2) The rear panel of the power supply is turned on.

2. Why does LED of LAN not light?

Reasons:

1) Network cable is damaged or loose connection;

- 2) Cable type errors;
- 3) Long lines outside the allowable range.

Solution:

- 1) Replace the network cable, and pay attention to the standard Ethernet cable must be parallel or crossing lines.
- 3.Why is LED of LOS always blinking?

Reasons:

- 1) Fiber failure;
- 2) Center office equipment failure.

Solution:

1) Inspect fiber is connected property, is connected to the correct connector, optical power is normal;

2) Contact your operator.

5. Why does LED of PON flashes instead of always on?

Reasons:

- 1) Fiber optic connector is loose;
- 2) Central office equipment failure;
- 3) Fiber optic connector is dust.

Solution:

- 1) Inspect fiber is connected property;
- 2) Cotton ball with alcohol swabbing fiber optic connectors;
- 3) Contact your operator.
- 3. Why does ONU stop working after working for a long time?

Reasons:

- 1) Power supply is not working properly;
- 2) The equipment from overheating.

Solution:

- 1) Check if there is contact with abnormal voltage is too high or too low;
- 2) Check the ambient conditions, vents are nominal ventilation.
